IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

Applicant	Wesley W. Whitmyer, Jr.
Serial No. - Pending	Filing Date: November <u>3</u> , 2000
Title of Application:	OnSite Backup For Inernet-Based Data Processing

Assistant Commissioner for Patents
Washington, DC 20231

Verified Statement Claiming Small Entity Status -- Independent Inventor

As below named inventor, the undersigned declares that I qualify as an independent inventor as defined in 37 CFR 1.9(c) for purposes of paying reduced fees under Section 41(a) and (b) of Title 35, United States Code, to the Patent and Trademark Office with regard to the invention entitled **OnSite Backup For Inernet-Based Data Processing** described in the specification filed herewith.

I have not assigned, granted, conveyed, or licensed and am under no obligation under contract or law to assign, grant, convey or license, any rights in the invention to any person who could not be classified as an independent inventor under 37 CFR 1.9(c) if that person had made the invention, or to any concern which would not qualify as a small business concern under 37 CFR 1.9(d) or a nonprofit organization under 37 CFR 1.9(e).

Each person, concern, or organization to which I have assigned, granted, conveyed, or licensed or am under an obligation under contract or law to assign, grant, convey, or license any right in the invention is listed below:

There is no such person, concern, or organization.

I acknowledge the duty to file, in this application or patent, notification of any change in status resulting in loss of entitlement to small entity status prior to paying or at the time of paying, the earliest of the issue fee or any maintenance fee due after the date on which status as a small entity is no longer appropriate (37 CFR 1.28(b)).

I hereby declare that all statements made herein of my own knowledge are true and that all statements made on information and belief are believed to be true; and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under Section 1001 of Title 18 of the United States Code, and that such willful false statements may jeopardize the validity of the application, any patent issuing thereon, or any patent to which this verified statement is directed.

November 6, 2000

JoAnne M. Cassone

ONSITE BACKUP FOR INTERNET-BASED DATA PROCESSING

Claim of Priority

This application is a continuation in part of copending U.S. Patent Application Serial No. 09/610,709 filed July 7, 2000.

Field Of The Invention

The invention relates to outsourced, Internet-based data processing and more particularly to safeguarding customer/client data when a business outsources data processing to third party Internet-based systems.

Background Of The Invention

In an effort to improve customer service, companies are increasingly moving their data processing systems onto the Internet and providing web interfaces for their customers to see and manipulate their own data. Examples include my prior U.S. Patent No. 5,895,468 and related U.S. Application Serial No. 09/237,521. Many other Internet based order entry and payment billing systems also exist.

Also companies are or soon will be outsourcing data processing for their own customers to third parties who, for example, develop and host the companies' web sites. This cuts costs and relieves companies of having to hire software expertise to service their customers and also relieves them of having to maintain hardware for scalability and to prevent service outages which erode customer confidence in the company. Further, hardware can be located in one place to minimize maintenance and bandwidth

costs, while software and data entry can be located in one or multiple places where it is least expensive and can offer 24/7 coverage.

One difficulty companies face when considering whether to outsource data-processing to third party, Internet-based systems is the safeguarding of their and their clients' data. This problem is exacerbated when the company has a duty or professional responsibility to safeguard the data, such as a publicly traded company, law firm or medical practice. Another difficulty companies face in considering to outsource is continuity of service if, for example, the third party were to go out of business.

Many companies who currently perform their own data processing and are sensitized to the need to safeguard their and their customers' data have recently connected their LANs to the Internet, and are beginning to use third-party, Internet-based backup services (see FIG. 2). This provides a prudent off-site backup but does not offer the benefits of outsourcing the data processing to the Internet. Internet data backup companies include, inter alia, and Storage Tek.

Internet-based application service providers, so-called "ASPs" are known and provide the advantage that hardware and software maintenance and upgrades are centrally managed by a third and not by each user or each LAN (see FIG. 3). User data may even be stored on the internet site, however, the data is still entered and manipulated by each user on his LAN/computer and the data manipulation and reporting is handled by each user on his LAN/computer.

What is desired, therefore, is an Internet-based data processing system which safeguards data providing an incentive for companies to outsource their data processing. Safeguarding applications, and especially any user customized settings, would also be desirable.

Summary Of The Invention

It is an object of the invention to safeguard the integrity of client data in an Internet-based data processing system or business.

Another object of the invention is to provide third party Internet-based data processing in which clients have access to and control over their own data.

A further object of the invention is to provide an Internet-based data processing system in which clients can obtain a copy of their data for on-site backup.

Yet another object of the invention is to provide a system of the above character in which the backup is provided in a format other than that used by the third party data processing system.

Yet a further object of the invention is to provide a system of the above character in which the data is encrypted to protect its confidentiality.

Still another object of the invention is to safeguard the third-party data processing software for use by the client in the event the third party were to go out of business.

These and other objects and advantages will become more apparent from the following detailed description considered with reference to the accompanying drawings.

Brief Description Of The Drawings

FIG. 1 is a block diagram of an Internet-based data processing system providing backup on clients' sites.

FIG. 2 is a block diagram of prior art systems providing Internet backup for data processing on clients' sites.

FIG. 3 is a block diagram of prior art systems providing Internet hosting of application and storage of data.

FIG. 4 is a block diagram of the system of FIG. 1 illustrating additional format conversion and encryption features.

Detailed Description Of Drawings

Fig. 1 is a block diagram of an Internet-based data processing system providing backup on clients' sites. The client computer 20 and data processing system 15 are connected by an Internet communications link 10. The client computer 20 executes software (Fig. 4 No. 38), residing on the data processing system 15, for storing data on the data processing system. The client computer 20 executes software, residing on the data processing system 15, for displaying, updating, and deleting data 18 stored on the central processing system 15. The data processing system 15 transmits 14 a copy of stored data to the client computer 20. The client computer 20 issues commands 18 for transmitting (restoring) data 16 back to the data processing system 15. The client computer 20 executes software 18, residing on the data processing system 15, requesting reports from the data processing system 15. The data processing system 15 transmits reports 22 to the client computer 20. The client computer can generate reports 24 and transmit said generated reports to a client customer 26.

FIG. 2 is a block diagram of prior art systems providing Internet backup for data processing on clients' sites. The client computer 50 and data backup system 55 are connected by an Internet communications link 70. Data displayed, manipulated, and deleted (not shown) by the client computer 50 is stored on the client computer 50. The client computer 50 executes software for transmitting a copy of data 52 to the data backup system 55. The client computer executes software for retrieving data 54 stored on the data backup system 55. There is no onsite backup of data for the client computer 50 to retrieve.

FIG. 3 is a block diagram of prior art systems providing Internet hosting of application and storage of data. The client computer 60 and application hosting system 65 are connected by an Internet communications link 75. Data displayed, manipulated, and

deleted (not shown) by the client computer 60 is stored on the application hosting system 65. There is no onsite backup of data for the client computer 60 to access.

FIG. 4 is a block diagram of the system of FIG. 1 illustrating additional format conversion and encryption features. This additional feature allows a client to back-up data on-site that is securely stored in a plurality of formats the client may require. The client computer 20 transmits a request 32 to the data backup system 15. The data backup system 15 accesses data (stored on the data backup system 34), reformats the data, encrypts the data, and transmits the data 40, 14 to the client computer 20. The client computer 20 receives, decrypts, and stores 38 the data onsite 36.

It is to be understood that although specific embodiments of the invention have been described herein in detail, such description is for purposes of illustration only and modifications may be made thereto by those skilled in the art within the scope of the invention.

What is Claimed

1. A system for onsite backup of internet-based data comprising:
 - a central computer;
 - a client computer;
 - a communications link between said central computer and the Internet;
 - a communications link between said client computer and the Internet;
 - at least one database containing a plurality of data records accessible by said central computer, each data record containing a client identification number;
 - software executing on said central computer for receiving a data backup request;
 - software executing on said central computer for transmitting said data backup to said client computer.
2. The system of claim 2 further comprising of software executing on said client computer for storing said data backup in a location accessible to said client computer.
3. The system of claim 2 further comprising of software executing on said central computer for retrieving said data backup.
4. A system for onsite backup of internet-based data comprising:
 - a central computer;
 - a client computer;
 - a communications link between said central computer and the Internet;
 - a communications link between said client computer and the Internet;
 - at least one database containing a plurality of data records accessible by said central computer, each data record containing a client identification number;

software executing on said central computer for receiving commands from said client computer;

software executing on said central computer for receiving data from said client computer;

software executing on said central computer for storing said received data in said database;

software executing on said central computer for generating a data backup request form;

software executing on said central computer for transmitting said data backup request form through the internet;

software executing on said central computer for receiving a reply to said data backup request form;

software executing on said central computer for transmitting said data backup to said client computer.

5. The system of claim 4 further comprising of software executing on said client computer for storing said data backup in a location accessible to said client computer.

6. The system of claim 4 further comprising of software executing on said central computer for retrieving said data backup.

7. A system for onsite backup of internet-based data comprising:

a central computer;

a client computer;

a communications link between said central computer and the Internet;

a communications link between said client computer and the Internet;

at least one database containing a plurality of data records accessible by said central computer, each data record containing a client identification number;

software executing on said central computer for receiving commands from said client computer, for receiving data from said client computer, and for storing said data in said database;

software executing on said central computer for receiving a data backup request and for receiving a data format conversion request;

software executing on said central computer for retrieving said data from said database and for converting said data to a format corresponding to said data format conversion request;

software executing on said central computer for encrypting said data backup;

software executing on said central computer for transmitting said data backup to said client computer; and

software executing on said client computer for decrypting said data backup.

8. The system of claim 7 further comprising of software executing on said client computer for storing said data backup in a location accessible to said client computer.

9. The system of claim 7 further comprising of software executing on said central computer for retrieving said data backup.

Abstract

A system for onsite backup of internet-based data is provided. The system includes a central computer, a client computer, a communications link between the central computer and the Internet, and a communications link between the client computer and the Internet. The system also includes at least one database containing a plurality of data records accessible by the central computer, each data record containing a client identification number. Software executing on the central computer receives a data backup request, and software executing on the central computer transmits the data backup to the client computer.

Declaration and Power of Attorney

As below-named inventor, I hereby declare that:

My residence, post office address, and citizenship are as stated below next to my name.

I believe that I am the original, first and sole inventor of the subject matter which is claimed and for which a patent is sought on the invention entitled **OnSite Backup For Inernet-Based Data Processing** (File No. 03000-P0003C WWW/TMO), the specification of which is attached hereto.

I hereby state that I have reviewed and understand the contents of the above-identified specification, including the claims, as amended by any amendment referred to above. To the best of my knowledge, information, and belief the facts stated therein are true.

I acknowledge the duty to disclose information which is material to patentability as defined in Title 37, Code of Federal Regulations, §1.56.

I hereby claim foreign priority benefits under Title 35, United States Code, §119 of any foreign applications for patent or inventor's certificate listed below and have also identified below any foreign applications for patent or inventor's certificate having a filing date before that of the application on which priority is claimed.

None

I hereby claim the benefit under Title 35, United States Code, §120 of the following United States application(s) listed below, and insofar as the subject matter of each of the claims of this Application is not disclosed in the prior United States application in the manner provided by the first paragraph of Title 35, United States Code, §112, I acknowledge the duty to disclose information which is material to patentability as defined in Title 37, Code of Federal Regulations, §1.56 which occurred between the filing date of the prior application and the national or PCT international filing date of this application.

United States Application No. 09/610,709 Filed July 7, 2000

I hereby claim the priority benefits under Title 35, United States Code §119(e) of the following United States provisional application(s) listed below:

None

I hereby declare that all statements made herein of my own knowledge are true and that all statements made on information and belief are believed to be true; and fur-
